Dataset / task	Before rev2b	Rev2b	How it was used or will be used
Synthetic kinship / relation chains	Used extensively	Used	Extract family relations; execute rules; test unseen
Synthetic state updates / access worlds	Used in F05 and F08	Used and extended	Track people, objects, locations, holders and permi
Synthetic Python reasoning tasks	Not a major earlier track	Used	Test variable references, assignments, function cal
bAbI	Used	Historical reference	Test location tracking, reasoning and continual-lear
RuleTaker	Used	Historical reference	Test logical inference from supplied facts and rules
DROP	Used, especially F06	Planned secondary continuation	Real reading comprehension involving numerical fa
GSM8K	Used in F07	Not a main rev2b endpoint	Convert natural-language math problems into arithr
SVAMP	Used in F07	Not a main rev2b endpoint	Test transfer of arithmetic reasoning to differently v
OpenWebText (OWT)	Used extensively	Used	General language training, preservation, next-token
WikiText	Used in generic-language checks	WikiText-103 planned	General language-model evaluation and preservatio
CNN text	Used in F09	Not a main rev2b endpoint	Evaluate symbolic name-memory effects on ordina
LAMBADA	Used in earlier checks	Planned secondary	Evaluate discourse-dependent word prediction and
Real Python repositories / CodeParrot code	Not a main earlier track	Used	Real code prediction, identifier completion, determi
PY150 / CodeXGLUE	Not a main earlier track	Planned secondary	Standardized code-completion evaluation.
HumanEval+ / MBPP+	Not established as completed	Planned secondary	Evaluate complete Python program generation usin
CounterFact / zsRE	Not established as completed	Planned ST2	Test factual knowledge editing, paraphrase general
MQuAKE	Not established as completed	Planned ST2	Test multi-hop reasoning after factual knowledge e
PG-19	Not established as completed	Planned ST3	Test persistent memory of names and relationships
CLUTRR	Not established as completed	Proposed external reference	Test relational reasoning and compositional genera
Natural evidence-grounded prose	Limited earlier pilots	Planned E4	Extract facts from real passages with source evide

Dataset	What it tests	Why it matters for NESS	Priority
Real Python repositories + CodeXGLUE	Code understanding, variable bindin	Tests whether exact symbolic infor	High
HumanEval+ / MBPP+	Complete Python program generatic	Moves beyond individual token pre	High
DROP	Natural-language numerical reasoni	Tests extraction of typed events ar	High
CounterFact + zsRE	Factual knowledge updating	Tests whether external symbolic m	High
MQuAKE	Multi-hop reasoning after factual ed	Tests whether updated facts propa	Very high
PG-19	Long-term memory beyond context	Tests persistent entities, relationsh	Medium-high
Natural evidence-grounded prose	Semantic extraction from real passa	Directly addresses unfamiliar word	Very high
WikiText-103 / OpenWebText	General language modeling and pre	Tests whether NESS damages or ir	Essential control

Dataset	Research objective	Why especially valuable for NESS	Recommended priority
HotpotQA	General semantic grounding and mu	Diverse natural-language relationsh	1 - Very high
ASyMOB	Mathematical reasoning and symbc	Tests exact mathematical operatio	2 - Very high
CrossCodeEval	Cross-file code understanding and s	Tests real code dependencies and	3 - High
miniF2F	Formal mathematics and theorem p	Tests translation between informal	High
SciCode	Scientific mathematical and compu	Tests research-derived scientific pı	Very high - later stage
ScienceAgentBench	End-to-end scientific research workf	Tests long tasks involving scientifi	Very high - advanced stage
